- Manage Database using MySQL, SQL Server.
- Backend Dev using PHP with Laravel and Yii Framework
- Frontend Dev using Javascript, ReactJs
- Python dev as Data Scientist.

Work Experience:

December 2022 - Actual: Full Stack Dev - Wakapi - Mendoza

May 2022 - December 2022: Ssr PHP Developer at GlobalHitss - Capital Federal - Buenos Aires:

- I'm working with a streaming platform on the "Search and Recommendation" project, using PHP with Symphony and Zend frameworks and using NoSQL - ElasticSearch as a database doing analysis and implementing the solution of the task that can be an productive issue, bug or new functionality of the platform.

  To organize the project we use Jira and Gitlab as CI.

January 2021 - March 2022: Ssr Full Stack Developer at Dafiti Group - Capital Federal - Buenos Aires:

- Is an e-commerce store where I was in a team of 3 dev and 1 TL doing a REST API using golang as a language with a postgresql database of a wallet so the client used to buy anything on the platform which was developed in PHP. Also i did bug fixing of the platform using PHP with Yii Framework.

January 2018 - December 2020: Programmer analyst at Accenture - La Plata - Buenos Aires.

- I worked in different projects using Salesforce as dev with apex code and also as admin. I worked for different clients, like energy supply companies in South America, human resources companies and medical care companies. My daily task was to take a ticket from jira. There could be an issue, bug or maybe new functionality, in any case I had to analyze the problem, estimate the time of solving and implement a solution with apex code if it was necessary or using an admin platform. In all those projects I worked with a team of 2 devs, 1 TL and 1 QA.

February 2017 - December 2017: Programmer PHP at You Market - La Plata - Buenos Aires.

- I worked as a PHP developer, I integrated a team of 2 devs and 1 PO. My daily task was to solve any task reported for the users of the e-commerce platform and for any of the members of different departments of the company. Also I had to plan a time for any new functionality. Here we used PHP version 7, Javascript and MySQL as DB.

March 2016 - February 2017: Programmer PHP at Signum Energy - La Plata - Buenos Aires.

- I worked as a PHP Junior Developer implementing new functionalities, doing bug fixes and adding new data to local systems for analysis of energy consumption for different companies and final users.

  I worked with another dev and we used PHP version 6 without any framework, as frontend we used Javascript and MySQL for DB.
